

## Staying Ahead of the Curve

### New Seams and Bolsters

BioFit is proud to introduce four seating series featuring a tailored design that results in a rich, contoured profile, softer feel and improved long-term performance – with the same level of durability you've come to expect from all BioFit products.

Add Up to Sleek Contoured Style and Increased Comfort

**HLN**

Seat: 18 1/2" wide x 17" deep x 3" thick  
 Back: 15 1/2" wide x 14 1/2" high

**FCN**

Seat: 21" wide x 19" deep x 3" thick  
 Back: 18" wide x 19" high

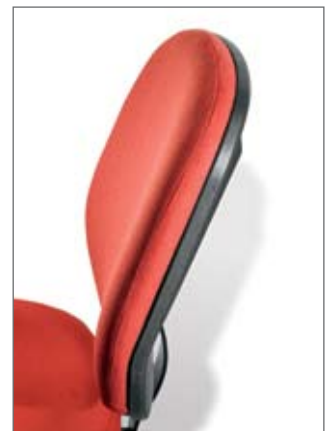

**Enhanced Design, Support and Durability Seems So Easy**

The incorporation of the upgraded design is only part of the story behind the fresh look and feel of BioFit's new HL, FC, HC and FL chair series – the rest lies in the foam. Using

seams allows us to minimize compression of pre-contoured foam seat and backrest cushioning during the manufacturing process. This not only creates fuller lines and enhanced form, but subsequently adds a noticeable increase in the level of user comfort and support. Plus, this natural, unencumbered expansion of the foam helps the chairs remain substantially more comfortable over the long term.

HL, FC, HC and FL chairs are suited for a variety of environments, including healthcare, educational, industrial and office, as well as high-tech workplaces with static control requirements. Of note, all four series with the sewn seam design are available in a wide range of fabric upholstery options.
